Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Prior art fails to disclose or fairly suggest:

- A low profile antenna for use in a vehicle remote communication system utilizing a predetermined RF signal comprising a transmission line having a first and second signal conductors, said first conductor being coupled to a feed point on said lineal antenna trace and said second conductor being coupled to both said ground plane and a second point on said lineal antenna trace spaced apart from said feed point, wherein said antenna is an active antenna further comprising a plurality of active components mounted on a second side of said printed circuit board, and wherein said first conductor is coupled to at least one of said active components, in combination with the remaining claimed limitations as called for in independent claim 1 (claims 2-4 and 6-12 are allowed since they are dependent on claim 1);

signal conductors, said first conductor being coupled to a feed point on said lineal antenna trace and said second conductor being coupled to both said ground plane and a second point on said lineal antenna trace spaced apart from said feed point, wherein said feed point and said second point of said lineal antenna trace are spaced apart by a predetermined distance less than one quarter wavelength of said RF signal, in combination with the remaining claimed limitations as called for in independent claim 13 (claims 14-18 are allowed since they are dependent on claim 13); and

- A low profile antenna for use in a vehicle remote communication system utilizing a predetermined RF signal comprising a transmission line having a first and second signal conductors, said first conductor being coupled to a feed point on said lineal antenna trace and said second conductor being coupled to both said ground plane and a second point on said lineal antenna trace spaced apart from said feed point, wherein said feed point is located at one of said first and second end regions and said second point is located at said middle region, and wherein said feed point and said second point are spaced apart by a predetermined distance less than one quarter wavelength of said RF signal, in combination with the remaining claimed limitations as called for in independent claim 20.
